Code	Description
SS17-01	COXY CUSHION – Seat support Double Layer Cushion with anti-decubitus properties in 3D material – Double Layer Weight: 1.050 gr/m ³

Product Description	Seat cushion with properties for the prevention of decubitus made with polyester fiber. The high retractility and low compressibility of the material give the cushion a high elastic force that supports and distributes the weight received in the best possible way, avoiding the crushing of the skin, the slowing of blood circulation and the related consequences during prolonged sitting sessions. The high elastic strength and the breathability allow to prevent the onset of pressure ulcers. The double layer of 3D material gives greater comfort.
Intended use	Cushion in 3D material realized for the prevention of decubitus during prolonged sitting sessions. It decreases bone pressure and improves blood circulation in the tissues. Reduces shear and friction forces and promotes air circulation.
Assembly	The product is supplied ready for use. The presence of the non-slip layer on the bottom allows to keep the cushion in the right position.
